

FARUKH MUMTAZ

Aspiring DevOps Engineer | Security Researcher

farukhofficial555@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Islamabad, PK

SUMMARY

Software Engineering student with hands-on experience in web application penetration testing and cloud security engineering. Combines an attacker's perspective with practical skills in building secure, automated cloud infrastructure. Focused on API security, IAM hardening, and DevSecOps practices.

EDUCATION

BS Software Engineering — COMSATS University Islamabad(Wah Campus) 2024 – 2028 (Expected)
Dean's Merit Award | 2nd Position in University in Semester 1 · CGPA: **3.46 / 4.0**

EXPERIENCE

Penetration Tester — GRNZ Tech

Sep 2025 – Present

- Conducted web application penetration tests on Zoho and Atlassian SaaS platforms, identifying Broken Access Control vulnerabilities (IDOR/BOLA) in multi-tenant environments.
- Documented findings with clear reproduction steps and remediation guidance; worked with development teams to verify fixes against OWASP API Security Top 10.
- Performed post-fix validation testing to confirm vulnerabilities were fully remediated.

Security Researcher — Bugcrowd (Bug Bounty)

Ongoing

- Participating in crowdsourced security programs, focusing on API authorization flaws and Broken Object Level Authorization (BOLA) in SaaS applications.
- Submit structured vulnerability reports with proof-of-concept steps and CVSS severity ratings through the Bugcrowd platform.

PROJECTS

LLM Security Gateway

Python · FastAPI · Docker · GitHub Actions

- Built a FastAPI middleware service to secure LLM API endpoints — detects prompt injection attempts and anonymizes PII using Microsoft Presidio before passing requests upstream.
- Deployed via Docker with a GitHub Actions CI/CD pipeline; achieved full detection coverage on test inputs with sub-50ms added latency.

AWS Security Guardian

Python · Boto3 · AWS Lambda · EventBridge · Terraform

- Developed an event-driven IAM remediation tool on AWS: EventBridge triggers Lambda functions to automatically detect and roll back unauthorized IAM privilege escalation.
- Infrastructure provisioned with Terraform; enforces least-privilege IAM policies and reduces manual response time for cloud access control incidents.

Aegis-Flow

Node.js · PostgreSQL · Docker · Terraform

- Built and deployed a containerized API gateway using Docker Compose, with full infrastructure defined in Terraform — bringing deployment time under 2 minutes across environments.
- Applied network segmentation and least-privilege container policies to limit blast radius in case of compromise.

TECHNICAL SKILLS

Cloud & IaC: AWS (Lambda, IAM, EventBridge, CloudTrail) · Terraform · Docker · GitHub Actions

Security: Burp Suite Pro · OWASP API Top 10 · API Penetration Testing · IDOR / BOLA · Nuclei

Development: Python (Boto3, FastAPI) · Node.js · PostgreSQL · Bash

Concepts: DevSecOps · Zero-Trust · CI/CD · SaaS Security · Shift-Left Security · IAM Hardening

LANGUAGES

English (Professional) · **Urdu** (Native)
